
TradeIQ AI-Powered Trading Systems

Course Syllabus

Live Classes Edition

Module 01 Indian Market Infrastructure & Trader Mindset

1. NSE vs BSE - roles, differences, why NSE dominates for algo trading
2. SEBI as regulator: what it protects and restricts
3. Market hours: pre-open (9:00–9:15 AM), regular session, post-market
4. Settlement cycles: T+1 equity, same-day F&O
5. Instruments: Equity, Index, Futures, Options - suitability for beginners
6. Market participants: FIIs, DIIs, retail, HFTs - who moves the market
7. Why most traders fail: overtrading, no process, bad sizing
8. Probability, expectancy, and edge - defined and calculated
9. India VIX as a first risk-awareness and position-sizing tool

Module 02 Technical Analysis: Reading the Language of Price

1. Anatomy of a candle: open, high, low, close - buyer vs seller battle
2. Bullish candles: Marubozu, Hammer, Bullish Engulfing, Morning Star
3. Bearish candles: Shooting Star, Bearish Engulfing, Evening Star, Hanging Man
4. Doji: indecision and why context matters more than the pattern alone
5. Trendlines: uptrend/downtrend construction, 3-touch validation rule
6. Support and resistance: role reversal logic, institutional round numbers
7. Chart patterns: Flag, Pennant, Triangle (continuation)
8. Chart patterns: Head & Shoulders, Double Top/Bottom (reversal)
9. Volume confirms price

Module 03 Market Structure, Price Action & Context

1. Three market phases: Trend, Range, Transition - and which strategy suits each
2. Institutional price action: accumulation, distribution, manipulation, trend
3. Why retail stop-losses get hunted - and how to place stops differently
4. Valid breakout vs fakeout: candle close, volume, retest criteria
5. Multiple timeframe confirmation: 15-min signal confirmed on daily
6. When NOT to trade: first/last 15 min, event days, VIX above 25

Module 04 Basics of Python for Traders

1. Introduction to Python, Setup
2. Everything needed in Python for Building Algo (Basics, String, Loops, Dictionaries, Function, File handling, Modules, Packages, etc)

Module 05 AI as Your Trading Co-Pilot

1. What AI CAN do: explain, generate code, stress-test logic, research, review journals
 2. What AI CANNOT do: predict markets, guarantee edge, replace context judgment
 3. AI tool stack: Claude - strategy analysis and stress-testing
 4. AI tool stack: ChatGPT - code generation and debugging
 5. AI tool stack: Perplexity - real-time market research with cited sources
 6. AI tool stack: TradingView AI - chart analysis, Pine Script assistance
 7. AI tool stack: Google NotebookLM - uploading and querying SEBI circulars
 8. Prompt engineering: Role, Context, Constraint, Output Format structure
-

Module 06 No-Code Strategy Building with TradingView & AI

1. Understanding Volume
 2. Understanding Common Indicators
 3. Writing Pine Script v5: AI writes it, you read and verify every Logic
 4. Debugging Pine Script errors with AI
 5. Reading strategy tester output: Net Profit, Win Rate, Max Drawdown, Profit Factor
 6. Warnings: strategy tester exclusions
-

Module 07 Python for Traders - AI Does the Heavy Lifting

1. Essential libraries
 2. The reading rule: understand every line before running any code
 3. yFinance tickers for Indian markets: RELIANCE.NS, ^NSEI, ^NSEBANK
 4. Data quality issues
 5. Coding some common indicators with AI to get hands on
 6. Look-ahead bias trap
 7. Duplicate entry prevention
 8. Paper trading and its log
-

Module 08 Backtesting, Metrics & Avoiding Overfitting

1. What backtesting means - and what it does not mean
 2. Real-world cost adjustments
 3. Understanding Metrics
 4. Overfitting: tuning to past data
 5. Walk-forward testing: sliding window validation
 6. Market regime test: strategy must work in bull, bear, and sideways markets
-

Module 08 AI for Trading - Continuous evolvement of this section to stay updated

1. How to Brainstorm with AI to build strategies
 2. Where and when to use AI to optimise any strategy
 3. AI for reverse engineering a strategy
 4. AI for market research & analysis
 5. How to use AI to make decisions
-

Module 08 Quant Model Building

1. HMM
 2. Monte Carlo simulations for strategy
 3. How to build them with AI
 4. Market regime test for strategy
-

Module 09 Live Broker API, Safety Controls & SEBI Compliance

1. API fundamentals: authentication, rate limits, order types
2. Zerodha KiteConnect, 5paisa API
3. Safety Controls when connected to broker
4. SEBI retail algo circular: broker-approved API routing requirement

Module 10 Trading Psychology & Institutional Trading Methods

1. How to think like big players
2. Institutional trading pattern
3. Who profits in options trading and why
4. Options mechanics: calls, puts, theta decay, IV crush
5. How to read institutional inflows
6. Pre-trading routine: VIX, Nifty direction, news, daily max loss, rules review

Module 11 Building Code Together

1. Creating few strategies of your choice
2. How to create and deploy algo for any market
3. How to create algo for any instrument (Crypto, Stocks, Forex)

Giveaways

1. Data for backtesting (worth lakhs)
2. Algos we build together
3. Prompts for creating strategies

Lifetime Support because learning should never stop
